

Citrix NetScaler 1000V

Product Overview

Citrix NetScaler is the industry's leading web application delivery solution. It increases the performance and availability of all applications and data. Citrix NetScaler 1000V brings together Citrix NetScaler with Cisco Nexus® 1000V Switch vPath technology for policy-based service insertion and chaining. As of Citrix NetScaler 1000V Release 10.1-124.14, vPath can be disabled to load-balance physical servers or load-balance workloads running on any hypervisor. Consequently, the Cisco Nexus 1000V virtual distributed switch is also optional when you are not using vPath technology.

Figure 1 shows Citrix NetScaler 1000V running on the Cisco Nexus 1110-X Cisco® Cloud Services Platform (CSP). An SSL offload card is also available for the Cisco Nexus 1110-X platform when high performance is needed. Citrix NetScaler 1000V also supports virtual appliances on VMware ESXi and Kernel-based Virtual Machine (KVM) hypervisors.
